

## Guideline to structure your idea

### „Resource-saving use of incontinence articles“

Please structure your description on the basis of the following aspects or alternatively mark the passage which contains information on the following aspects:

- 1) Which positive and negative consequences does your idea have on economic aspects, especially live-cycle costs (including transport costs, staffing costs for product use, energy costs, and disposal costs)?
- 2) Which positive and negative consequences does your idea have on ecologic aspects such as material intensity, environmental effects by energy, chemicals, materials, use of water, space required for production etc.?
- 3) Which positive and negative consequences does your idea have on the well-being of the users (for example health, comfort)?
- 4) Which positive and negative consequences does your idea have for the care staff (for example time expenditure for purchase, storage, use and disposal, hygiene and physical exertion)?
