

Evacuation

Indoor navigation and notifications enables people inside a building to have up to the second information of the best and safest route out of a building*.

This works by a notification of an Emergency being sent to the mobile device, the option to show me the route to the quickest exit, if that exit is blocked, then a new route can be calculated.

About indoo.rs

indoo.rs is a specialist in real-time indoor positioning and navigation. Due to GPS restriction indoors, wayfinding and location awareness is difficult in indoor spaces, where we actually spend more than 80% of our time. Using its best-of-breed patented technology, indoo.rs offers unique possibilities to exploit the indoor space and add location intelligence to mobile apps.

* App needs to be installed, information is dependant on app designer

Benefits

-  Instant emergency notification
-  Emergency exits shown on map
-  Routing to nearest emergency exit
-  Re-routing if needed
-  Tracking, if you are in the building or safely out

Features
