

### Visually impaired

There are a number of navigation solutions for visually impaired people available, from guide dogs to white canes and others in between. All of these enable a visually impaired person to get from A to B.

### What our customers say

*“Both indoo.rs and SFO care about things that matter, and what matters is the freedom to move about one’s environment independently with confidence and grace. With this solution, indoo.rs and SFO will change the way blind and low vision people travel.”*

### About indoo.rs

Indoo.rs is a specialist in real-time indoor positioning and navigation. Due to GPS restrictions indoors, wayfinding and location awareness is difficult in indoor spaces, where we actually spent 80% of our time. Using its best-of-breed patented technology, indoo.rs offers unique possibilities to exploit the indoor space and add location intelligence to mobile apps.
