

Office Navigator

Immense amounts of money are lost every year by corporations due to people not knowing where the meeting room is, underestimating the time it will take from one place to another or with not having a quick way to locate and book the nearest meeting room.

In a complex working environment people should focus on what matters most and not be hassled with finding the next meeting room on time.

About indoo.rs

indoo.rs is a specialist in real-time indoor positioning and navigation. Due to GPS restriction indoors, wayfinding and location awareness is difficult in indoor spaces, where we actually spend more than 80% of our time. Using its best-of-breed patented technology, indoo.rs offers unique possibilities to exploit the indoor space and add location intelligence to mobile apps.
